TRANSLATION IS LIKE CHOPPING AN ONION -FIRST, YOU THINK YOU'LL MANAGE IT.

AND THEN YOU END UP CRYING IN THE KITCHEN.

CS 2731 Introduction to Natural Language Processing

Session 22: Machine translation part 1

Michael Miller Yoder

April 1, 2024

School of Computing and Information

Course logistics: project

- Project basic working system **due this Thu Apr 4**
 - 1-2 pages, in ACL LaTeX format that final report will be in

Course logistics: classes

- No in-person lecture on Mon Apr 8 (solar eclipse)
 - Video lecture to watch asynchronously on Canvas

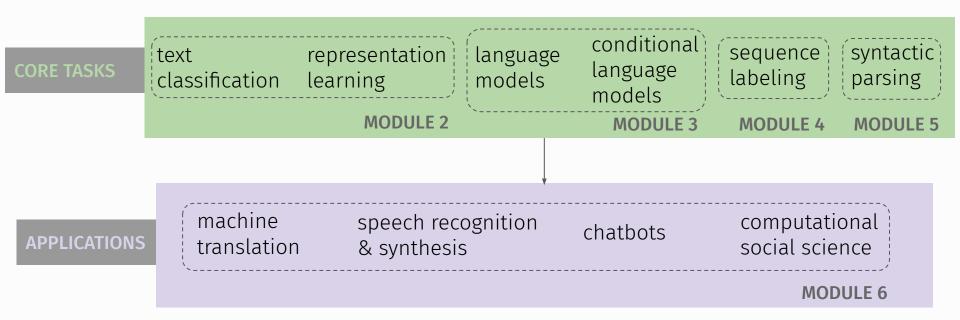

Course logistics: classes

- No in-person lecture on Mon Apr 8 (solar eclipse)
 - Video lecture to watch asynchronously on Canvas

1 point of extra credit offered for attending the following lectures
 Check next to your name on the paper in front of the class

Core tasks and applications of NLP

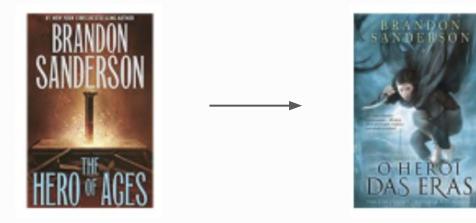

Overview: Machine translation part 1

- History of machine translation (MT)
- Translation in practice
- Exercise: translate some Tajik
- Why is translation difficult?
- Parallel corpora
 - Sentence alignment

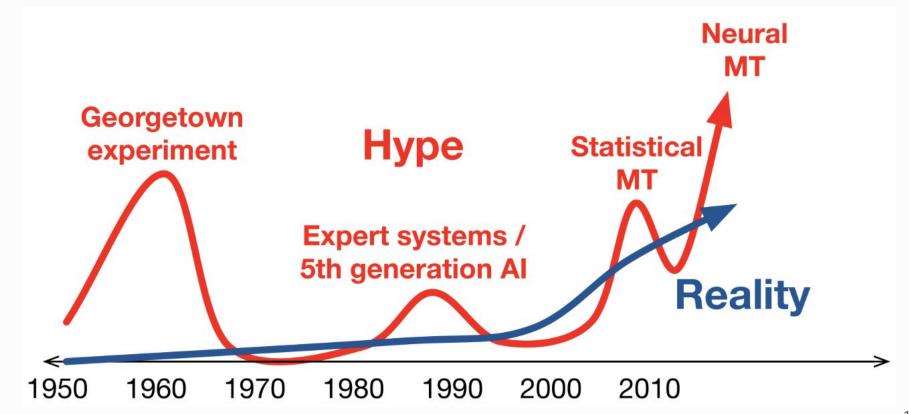

Translation

- Mapping a "text" in a source language to a target language
- "I went to the store to buy eggs" ------ "Eu fui à loja comprar ovos"

History of machine translation

MT history: hype vs reality

When did people start using computers to translate?

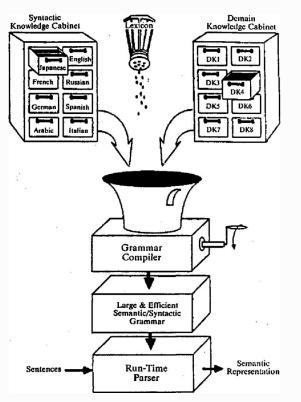

- Roughly 1950s
- Research stopped in the US for about 15-20 years after a 1967 report deemed it impossible
- Research resumed in the US in the early 1980s

What did early MT systems look like?

Human linguists wrote elaborate rules involving syntax, semantics, etc

```
(<S> <--> (<V>)
      ((x0 = x1)))
(<S> <--> (<NP> <S>)
      (((x2 subj-case) = *defined*)
       ((x2 subj-case) = (x1 case))
       (x0 = x2)
       ((x0 subj) = x1)))
 (<S> <--> (<NP> <S>)
      (((x2 obj-case) = *defined*)
       ((x2 obj-case) = (x1 case))
       (x0 = x2)
       ((x0 obj) = x1))
(emap *insert
   <=1=> insert ((CAT v) (SUBCAT trans))
   (role =sem (*physical-action))
   (:agent =syn (SUBJECT))
   (:theme =syn (DOBJECT))
   (:goal =syn (PPADJUNCT
               ((PREP into) (CAT n)))))
```

Slide adapted from Lori Levin

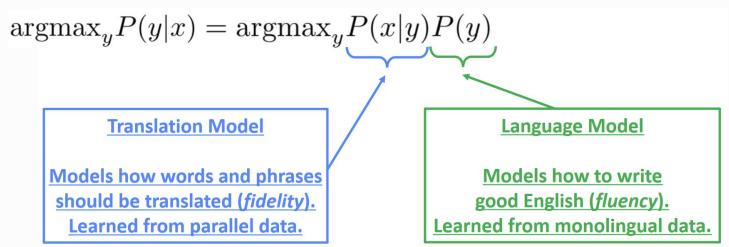

Learning to translate from data

Since the late 1980s, Machine Translation researchers have been using parallel corpora to train Machine Translation systems.

French	English
Qui contrôle strictement court le risque que ses ports restent encombrés d'épav \cdot .	Countries that impose stricter controls run the risk of being saddled with shipw $\dot{\cdot} \cdot$
Cela suppose que nous soyons capables de rehausser politiquement chacune des ins $\dot{\cdot}$.	This presupposes our being able to raise the profile of each of the institutions $\dot{\cdot} .$
La Lituanie dispose d'un potentiel appréciable de croissance économique durable.	Lithuania has considerable potential for long-term economic growth.
Enfin, les adultes incapables ne doivent participer qu'à des essais qui portent \cdot .	Finally, adults incapable of giving consent should only participate in trials th $\dot{\cdot}.$
Par intérêt économique, l'Europe, les États–Unis et l'Australie ne demandaient q \cdot .	Out of economic self-interest, Europe, the United States and Australia wanted to $\dot{\cdot}$.
J'ai reçu sept propositions de résolution , déposées sur la base de l'article 37 $$.	I have received seven motions for resolutions, tabled pursuant to Rule 37(2) of \cdot .
La Commission, une fois encore, n'a pas voulu s'engager dans des négociations in \cdot .	The Commission, again, has failed to commit itself to entering international neg $$.
L'entendre ainsi nier le fait que les aides d'État ont diminué durant la période $$.	Hearing him deny the fact that state aid was reduced in the period 1994–1998, ev $\dot{\cdot} \cdot$
L'avocat se voit interdire tout ce qui n'est pas permis par le strict respect de la légalité.	Lawyers are forbidden to do anything that is not strictly legal.
Les applaudissements qui l'ont salué montrent bien que lorsqu'il y a un objectif $\dot{\cdot}.$	The applause that rounded it off clearly demonstrates that when there is a speci $\dot{}.$

Statistical machine translation (1990s-2010s)

- Core idea: Learn a probabilistic model from data
- For French -> English, we want to find best English sentence *y*, given French sentence *x*
- Use Bayes Rule to break this down into two components to be learned separately:

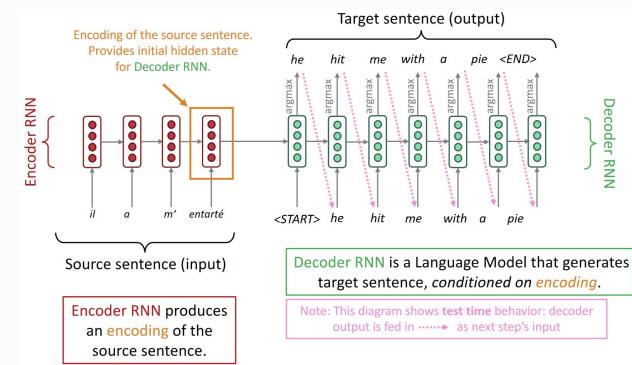

Slide adapted from Chris Manning

Statistical machine translation (1990s-2010s)

- The best SMT systems were extremely complex
 - Hundreds of important details
- Systems had many separately-designed subcomponents
 - Lots of feature engineering
 - Need to design features to capture particular language phenomena
- Required compiling and maintaining extra resources, like tables of equivalent phrases
 - Lots of human effort to maintain
- Repeated effort for each language pair

Neural machine translation (2010s on)

- Single end-to-end neural network
- Encoder-decoder (sequence-to-sequence, seq2seq) framework

Slide adapted from Chris Manning

Translation in practice

Machine translation is a \$3 billion market

Translation of text

Google Translate \equiv ★ Text Documents H Websites DETECT LANGUAGE JAPANESE ENGLISH PORTUGUESE ENGLISH HEBREW JAPANESE V 機械翻訳は30億ドルの市場です。 Machine translation is a \$3 billion market. X Kikai hon'yaku wa 30 oku-doru no ichibadesu. J **D** 43 / 5,000

Translation of speech

Person: Alexa, how do you say, "I hate this movie" in Japanese.

Alexa: "I hate this movie" in Japanese is "Kono eiga wa kirai da."

Person : Alexa, how do you say, "I hate this movie in Japanese" in Japanese.

Alexa: "I hate this movie in Japanese" in Japanese is "Kono eiga wa nihongo de wa kirai da."

Real time translation of meetings is also now viable.

Most translation is still done by human translators

Translation and Localization Industry Grows 11.8% in 2021 to USD 26.6bn

Post-editing and computer-assisted translation

• Checking and correcting of machine translation by humans is called **post-editing**

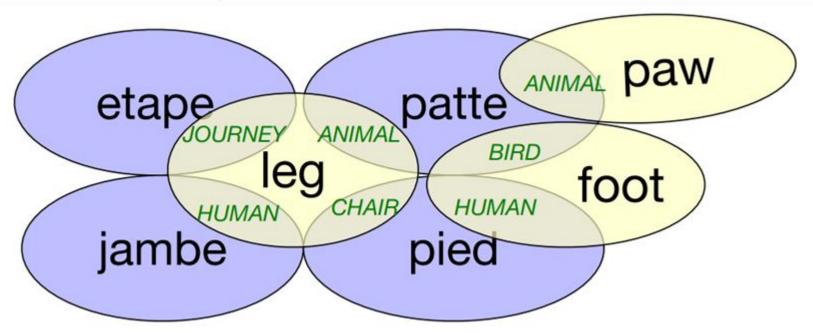

Evacuation Ladder

Why is translation difficult?

Why not just look up each word in a dictionary and translate word-for-word?

Many-to-many mappings of words

The grammars of some languages make distinctions that other languages don't make:

- Russian *kniga* translates to English as *the book* or *a book*.
 - English grammar makes a distinction in definiteness
 - Russian grammar does not.
- English *it* translates to French *il/le* (masculine) or *elle/la* (feminine).
- English *a* translates to French as *un* (masculine) or *une* (feminine).
 - Une chaise (a chair) vs un livre (a book)
 - French grammar makes a distinction in gender
 - English grammar does not.

Why not translate word-for-word: Different numbers of words to say the same thing

uygarlaştıramadıklarımızdanmışsınızcasına

"(behaving) as if you are among those whom we were not able to civilize" "civilized" uvgar "become" +las "cause to" +tir "not able" +ama +dik past participle +lar plural first person plural possessive ("our") +ImIz ablative case ("from/among") +dan past +miş

```
+siniz second person plural ("y'all")
```

+casina finite verb → adverb ("as if")

 English:
 He wrote a letter to a friend - SVO (verb-medial)

 Japanese:
 tomodachi ni tegami-o kaita - SOV (verb-final)

 friend
 to letter
 wrote

There are 3,344,720 speakers of *Tajik* in Tajikistan (one of the Central Asian republics of the former Soviet Union) and another million speakers in surrounding countries.

дуусти хуби ҳамсояй сумо ҳамсояй дуусти хуби сумо ҳамсояй хуби дуусти сумо

a good friend of your neighbor a neighbor of your good friend a good neighbor of your friend

Above are three phrases in Tajik with their English translations. Your task is to give the English translations of all four Tajik words. The possibilities are simply "good," "friend," "neighbor," and "your." The order of the words – which is not the same order as in English! – does the rest.

дуусти хамсояй хуби СУМО

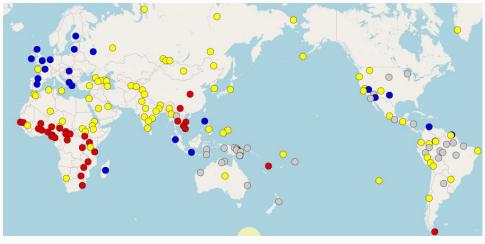

What is difficult about translation?

- People in NLP and MT have reduced "language divergences" to six major word order features from WALS, or seven lexical features
- But language typology is a system of "morphosyntactic strategies", of which there are 1000s

Feature 121A: Comparative Constructions

Yellow: X is big from Y, or X is big to Y Red: X is big, exceeds Y Grey: X is big, Y is small Blue: X is big than Y

But the picture is not so gloomy

- MT researchers have made much progress on handling language divergence
- Use data from typologically similar languages
- Use a multilingual model trained on many typologically different languages

Why is translation difficult? Style and genre

锚玉自在枕上感念寶釵

dai yu zi zai zhen shang gan nian bao chai

From "Dream of the Red Chamber", Cao Xue Qin (1792)

Chinese: Daiyu alone at bed top think baochai.

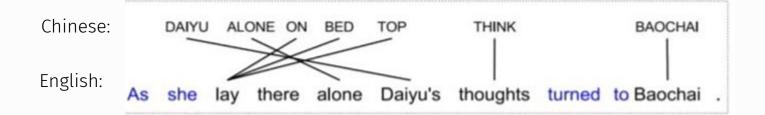

English: Daiyu alone on the bed thought about baochai.

Why is translation difficult? Style and genre

锚玉自在枕上感念寶釵

dai yu zi zai zhen shang gan nian bao chai

From "Dream of the Red Chamber", Cao Xue Qin (1792)

Parallel data is more likely to match styles (like literary style) than be an "exact" translation

Preparing for machine translation

- 1. Collect a parallel corpus
- 2. Align sentences
- 3. Tokenization
 - Split words into sub-word units, e.g., using BPE (Byte Pair Encoding)

Parallel corpora

Bao - Pitt Campus

Food

Appetizers 头台

Tea Egg 茶叶蛋 \$4.00

Pork Belly Slider 五花肉刈包 \$7.95

Popcorn Chicken 盐酥鸡 \$8.95

Cantonese Style Chicken Feet 广式风爪

Rolled Pancakes w/Roast Beef 牛肉卷饼 \$12.95

Pan Fried Radish Cake 萝卜糕 \$7.95

Crab Rangoon 蟹角 \$7.95

Indian Pan Fried Pancake 印度薄煎饼 ^{\$6,95}

Parallel corpora examples

- Europarl: Proceedings of the European Parliament; 21 languages; up to 2 million sentences
- United Nations Parallel Corpus: 10 million sentences in Arabic, Chinese, English, French, Russian, Spanish
- OpenSubtitles: movie and TV subtitles
- ParaCrawl: 223 million sentences in 23 EU languages

What about parallel corpora for the other 7000 languages?

- For many languages, the only parallel text is the Christian Bible.
- Low-resource MT is a large area of research
 - How to leverage monolingual texts (backtranslation)
 - Humans in the loop
 - Leverage multilingual models

The "Bender Rule" [Bender 2019]

- When doing NLP work, please **name** the languages you are working with
 - "Always name the language(s) you're working on"
- Don't just assume the "default" language is English and work on other languages is "language specific"
- English has particularities
 - Massive amounts of training data available
 - Relatively fixed word order
 - Few inflectional forms per word
 - Orthography: words indicated by whitespace, roughly phone-based

Conclusion

- Modern machine translation methods use the neural encoder-decoder framework
- MT is often used in conjunction with human translators
- Language divergences (in word meaning, syntax structure, etc) make MT difficult
- Parallel corpora are used for training MT systems
